ABOUT THE RACE

Are you tired of racing for cancer without a cure? This race is for you! **LET'S MOVE ... BEYOND HOPE WITH A CURE** is a global movement (a walk, run, bike, virtual fitness movement) brought to you by the Ora Lee Smith Cancer Research Foundation. We have already killed cancer in mice; help us kill cancer in humans. Join us on this journey with thousands of supporters, survivors, cancer-fighters, caregivers, families, and friends on **August 27, 2022**. Your partnership and support will directly impact how soon we can begin human clinical trials with our cancer-killing technology. This virtual fitness movement celebrates our collective ability to change the way cancer is treated and your sponsorship is critical to our success. Every step and pedal is a leap toward the finish line. Help us finish this race!

OUR FOUNDATION

Dr. Hadiyah-Nicole Green founded the Ora Lee Smith Cancer Research Foundation in honor of her late aunt, Ora Lee Smith. This foundation is on a mission to change the way cancer is treated and reduce cancer-patient suffering by providing care that is accessible, affordable, and effective.

Our goal is to bring our new, physics-inspired medical advancement out of the laboratory and into humans while ensuring it remains affordable and accessible for all. To accomplish our goals, the Ora Lee Smith Cancer Research Foundation uses a 501(c)(3) nonprofit business model and tax-deductible donations to raise funds to cover the costs of FDA approval and human clinical trials.

FOUNDER'S STORY

Approximately 14.1 million new people are diagnosed with cancer each year, and 8.8 million people worldwide die from it. This war on cancer is not about statistics: it's personal for me.

At 22 years old, I became the primary caregiver to my aunt and uncle, Ora Lee Smith and General Lee Smith, who were the only parents I knew. My aunt told me she would rather die than experience the side effects of chemotherapy and radiation. My uncle went to the brink of death, experiencing a 150-pound weight loss, long-term diarrhea, and skin disfiguration. I witnessed the horrors of both cancer and cancer treatments, and I knew there had to be a better way.

In memory of my loved ones, I developed a cancer treatment without side effects and founded a nonprofit foundation to keep that treatment affordable and accessible for all.

What continues to motivate me are the cries for help when someone receives a terrifying diagnosis or when they're told "there is nothing else we can do." With the technology I developed, there is something we can do—and with your support, we can begin human trials and save lives.
